The GUARD LEVEL® Adjustable Compact Alarm Sensor (ACLAS) is an ingenious way to assure overfill protection on bunker tanks and other small service tanks accommodating a variety of setups. Its rugged stainless-steel single alarm point level sensor fits into any tank opening of 1.5 inches (G1.5) or greater, while its dry reed switch opening allows for either an Normally Closed (N.C.) or Normally Opened (N.O.), allowing for simple sensor interface to any alarm system.

The level alarm is brilliantly designed so it can easily be adjusted to test proper function while ACLAS's non-sinkable Nitrophenyl float allows the compact level alarm sensor to be suitable for all petroleum products. Like all Bergan products, it is certified Intrinsically Safe due to its Simple Apparatus certification.
