OPTIONS

LONGER AND SHORTER LENGTHS TO ORDER.

HIGH TEMPERATURE.

FLANGE SIZES TO ORDER.

The GUARD LEVEL® Magnetically-Coupled Dip Stick (MDS) is a magnetically coupled gauge-stick giving a visual reference on tank barges during loading for designated "Safe" or "Hazardous" areas complying with all Code of Federal Regulations. Its rugged, stainless-steel design and simplicity of operation assures safe loading and prevention of tank overfills – with over 14,000 units currently in service.

The tricolor (green, yellow, and red) gauge stick measures the upper one meter (1M) of tank ullage. Longer and shorter stick lengths can be made to order, along with flange sizes. Our high temp (HT) version, also optional, is ideal for safe loading of hot oil and asphalt cargo.
