8" (200MM) ANSI FLANGE.

LOADING TERMINAL.

RECOMMENDED FOR TESTING PRIOR TO ARRIVING AT LOADING TERMINAL.

The GUARD LEVEL® PTU-M (Portable Testing Unit Mobile) is a rugged, handheld, battery-powered High Level (HL) and Overfill Level (HHL) alarm tester for U.S. inland and coastal barges. It is a useful tool to verify that the barge level alarms are in the correct working order before arriving at the terminal. This unit has series-connected alarm sensors terminating in port and starboard API shore alarm connectors. Like the Portable Testing Unit (PTU), the PTU-M is equipped with LED indicators and a dual-tone piezo buzzer that activates when alarm sensors are tested, as well as an API plug and a 10-foot extension cord.
